MAIL DATE DELIVERY MODE

07/09/2007

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/658,856

Applicant(s)

GROTENDORST ET AL.

Examiner

Lorraine Spector, Ph.D.

Art Unit

1647

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 April 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 15, 19-23 and 37 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 15, 19-23 and 37 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claims 15, 19-23 and newly introduced claim 37 are pending and under consideration.

The rejection of claims 16-18 under 35 U.S.C. §101 is moot in view of the cancellation of those claims.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. Applicants did not respond to this requirement in the amendment filed 4/9/2007.

Claim Interpretation

It is noted that the claims as amended are drawn to antibodies that bind to C-terminal fragments of CTGF “consisting of” specified residues, that represent exons IV and V of the full-length protein.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 15, 19-23 and 37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 15 as amended recites that the claimed antibody “inhibits DNA synthesis”, without any guidance as to under what conditions such synthesis would be inhibited. Accordingly, the metes and bounds of the claim cannot be determined.

Claim 22 as amended remains indefinite as the recitation that the “antibody comprises murine antibody binding region residues” is indefinite, because individual residues are common to all known living species; one cannot determine the species of origin of a single residue.

Art Unit: 1647

Further, the specification has not presented adequate written description to allow the artisan to determine whether some or all residues in the antigen binding region are "murine" residues. Therefore, the metes and bounds of claim 22 cannot be determined.

Claim 37 is indefinite because it depends from a cancelled claim.

Claim 37 is alsoindefinite because it is not clear whether applicants intend that the claimed antibody is human antibody, or a *humanized* antibody, or some other interpretation. The recitation that the "antibody comprises human antibody residues" is indefinite, because individual residues are common to all known living species; one cannot determine the species of origin of a single residue. Therefore, it is not clear what limitation claim 37 imparts to the protein of claim 18.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(f) he did not himself invent the subject matter sought to be patented.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 19, 21-23 and 37 are rejected under 35 U.S.C. 102(b) and (f) as being anticipated by, or alternatively, under 35 U.S.C. §103 as being obvious over Grotendorst et al., U.S. Patent Number 5,408,040, cited by applicants. Whereas Grotendorst and Neff are the inventors of the instant application, the patent names Grotendorst and Bradham, Jr. as inventors. Grotendorst et al. teaches antibodies which specifically bind to CTGF, but not to PDGF; see claims 2-4. The antibodies may also be monoclonal or polyclonal. At column 5, lines 37-45, it

Art Unit: 1647

is disclosed that antigenic fragments may be used to make antibodies. At column 6 Grotendorst teaches pharmaceutical uses for the antibodies for treating humans, thus anticipating claim 23 (see lines 16-22), radiolabeled antibodies (lines 34-35) and functional fragments of the antibodies (lines 47-50). At column 7, it is disclosed that goat antibodies were made to synthetic peptides containing the carboxyl sequences of the PDGF protein (as pointed out by applicants), which antibodies bound to CTGF; this is how CTGF was first isolated. The carboxyl terminus of SEQ ID NO: 4 corresponds to the carboxyl terminus of PDGF.

Paragraph DETX(19) of the '040 patent states:

The invention provides antibodies which are specifically reactive with CTGF polypeptide or fragments thereof. Although this polypeptide is cross reactive with antibodies to PDGF, not all antibodies to CTGF will also be reactive with PDGF. Antibody which consists essentially of pooled monoclonal antibodies with different epitopic specificities, as well as distinct monoclonal antibody preparations are provided. Monoclonal antibodies are made from antigen containing fragments of the protein by methods well known in the art (Kohler, et al., Nature, 256:495, 1975; Current Protocols in Molecular Biology, Ausubel, et al., ed., 1989). Monoclonal antibodies specific for CTGF can be selected, for example, by screening for hybridoma culture supernatants which react with CTGF, but do not react with PDGF.

This, taken with the previously cited teachings of making antibodies to the terminal portions of PDGF, fairly puts into the hands of the public antibodies that bind to the C-terminus of CTGF, compositions thereof, and methods of using such. The claims may be anticipated by the anti-PDGF antibodies disclosed in the '040 patent that were used to isolate CTGF; the examiner cannot determine such. Additionally, in the event that the anti-PDGF antibodies do not meet the claim limitations, the '408 patent puts into the hands of the public antibodies to the C-terminus of CTGF, via its teachings of making monoclonal and polyclonal antibodies to CTGF, and the teaching of making antibodies to synthetic peptide fragments of PDGF, a clearly analogous protein.

Applicants argue that the properties of the claimed antibodies are not taught by the '408 patent; this is not persuasive: See *In re Graves*, 36 USPQ 2d1697 at 1701, which teaches that A reference anticipates a claim if it discloses the claimed invention "such that a skilled artisan could take its teachings in combination with his own knowledge of the particular art and be in possession of the invention" such is the case with the '408 patent. Also see *In re Best*, 562 F.2d

Art Unit: 1647

1252, 195 USPQ 430 (CCPA 1977) and Ex parte Gray, 10 USPQ 2d 1922 1923, which teach that when a claimed product and the prior art product reasonably appear to be the same, the burden of proof is on Applicant to demonstrate a novel or unobvious difference between the claimed product and that of the prior art. Applicants have not met that burden.

Accordingly, the claims are anticipated by and/or obvious over Grotendorst et al.

Claim Rejections - 35 USC § 103

Claim 20 remains rejected under 35 U.S.C. 103(a) as being unpatentable over Grotendorst et al. in view of Hoogenboom et al., U.S. Patent No.5,565,332.

The teachings of Grotendorst et al. are summarized above. Grotendorst does not specifically teach human antibodies.

Hoogenboom et al. disclose human and humanized antibodies and methods of making such. At col. 1 lines 16-30 they disclose the advantages of such as being overcoming the problem of elicitation of anti-globulin response when a non-human antibody is administered to a human. See also col. 3 lines 8-15 in this regard. At col. 2 lines 57+, they disclose that antibody fragments can perform the function of whole antibodies, and set forth single chain antibodies as being examples of antibody fragments.

It would have been obvious to the person of ordinary skill in the art at the time the invention was made to substitute the anti-CTGF antibodies of Grotendorst into the human or humanized antibodies of Hoogenboom et al. to attain the known and expected advantages of such as set forth by the secondary reference and as discussed above.

Applicants traversal of this rejection has been fully considered but is not deemed persuasive for reasons cited with regard to the rejection under 35 U.S.C. §102(b).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or

Art Unit: 1647

improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 15, 19, 21-23 and 37 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2-4 of U.S. Patent No. 5,408,040. Although the conflicting claims are not identical, they are not patentably distinct from each other for reasons cited in the above rejection under 35 U.S.C. §102(b) and (f).

Claim 20 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2-4 of U.S. Patent No. 5,408,040 in view of Hoogenboom et al., U.S. Patent No. 5,565,332. for reasons cited above.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tamatani et al, U.S. Patent No.6,562,618, disclose and claim anti-CTGF antibodies.

Art Unit: 1647

The foreign priority date for the patent is 12/15/1998, one day after the claimed priority for this application.

Conclusion

No claim is allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Lorraine M. Spector. Dr. Spector can normally be reached Monday through Friday, 9:00 A.M. to 3:00 P.M. at telephone number 571-272-0893.

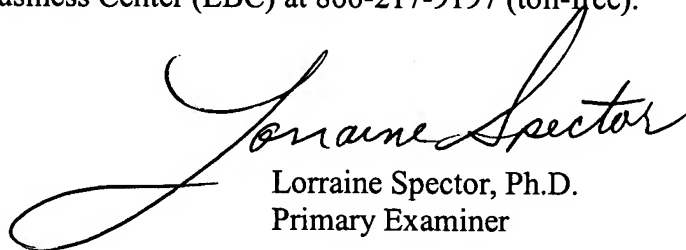

If attempts to reach the Examiner by telephone are unsuccessful, please contact the Examiner's supervisor, Dr. Gary Nickol, at telephone number 571-272-0835.

Certain papers related to this application may be submitted to Technology Center 1600 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). **NOTE:** If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. **NO DUPLICATE COPIES SHOULD BE SUBMITTED** so as to avoid the processing of duplicate papers in the Office.

Art Unit: 1647

Official papers filed by fax should be directed to **571-273-8300**. Faxed draft or informal communications with the examiner should be directed to **571-273-0893**.
